DTS ONE TOUCH DRUM TUNING SYSTEM

Finally... You Can Tune Your Acoustic Drums in Seconds!

The DTS enables fast and easy drum tuning by eliminating the need to adjust tension rods. Tuning is now accomplished by adjusting the single DTS tension bolt. This new "One-Touch" approach allows you to listen to all aspects of the drum sound change while you are tuning the drum. Most importantly, the top and bottom heads are now easily brought into tune with each other producing the best overall drum sound.

- Play in tune and stay in tune - sounding your best every time you play.
- The DTS simplifies finding sweet spots between top and bottom heads.
- Instantly achieves and maintains rod-to-rod balance with no pre-tuning.
- Works exclusively with hoops and rods; has no effect on drum shells.

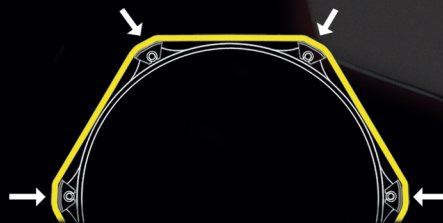

A Completely New Approach to Tuning Drums

Traditional drum tuning involves turning tension rods to raise and lower hoops for changing pitch. Achieving a desired pitch is slow and difficult due to the frustrating task of establishing and maintaining even tension around the hoop.

The new DTS approach uses Bracket leverage - instead of rod turning - to raise and lower the hoop. With no pre-tuning needed the DTS instantly and continuously produces even tension. Now with only a single bolt to adjust pitch - along with the huge advantage of automatic balancing - drum tuning is finally fast and easy.

The DTS Cable goes around the hoop mounting onto each of the Brackets. Increasing the Cable's tension - with the single DTS bolt - increases Bracket leverage between the tension rod heads and the hoop. This growing leverage applies a downward force on the hoop raising pitch. Loosening the Cable's tension lowers pitch.

Do You Want To Play, or Tune?

The DTS allows you to tune so quickly, you'll spend more time playing in tune, and less time tuning to play. Whether you're at home, in drum class, teaching, gigging, or laying down tracks, it's about playing in tune. The DTS also enhances creative control through instant pitch changing for songs, music styles, and venues.

Tune Your Drum Set in Place - Right From Your Throne!

In School

Or, anywhere you play your drums

DTS Product Line

The DTS is available in Complete Systems and Individual Component Packages.

DTS Systems Sizes Available:

Size	8"	10"	12"	13"	14"	15"	16"	18"
6- Lug	●	●	●	●	●	●	●	●
8- Lug			●	●	●	●	●	●
10-Lug				●	●	●	●	●

Components Available:

- Tension Assembly
- Tension Cables
- Brackets - 4 & 6 Packs

Accessories Available:

- T-Handle Tuning Wrench
- Rim-Mount Spacers
- Bolt Assembly
- Bolt Lubricant
